

Audio-Video Switch

HA11508 is an input signal switching IC designed for use in color televisions with external input terminals.

HA11508 provides switching operations for three video input circuits, three 2-channel audio circuits, and two output circuits.

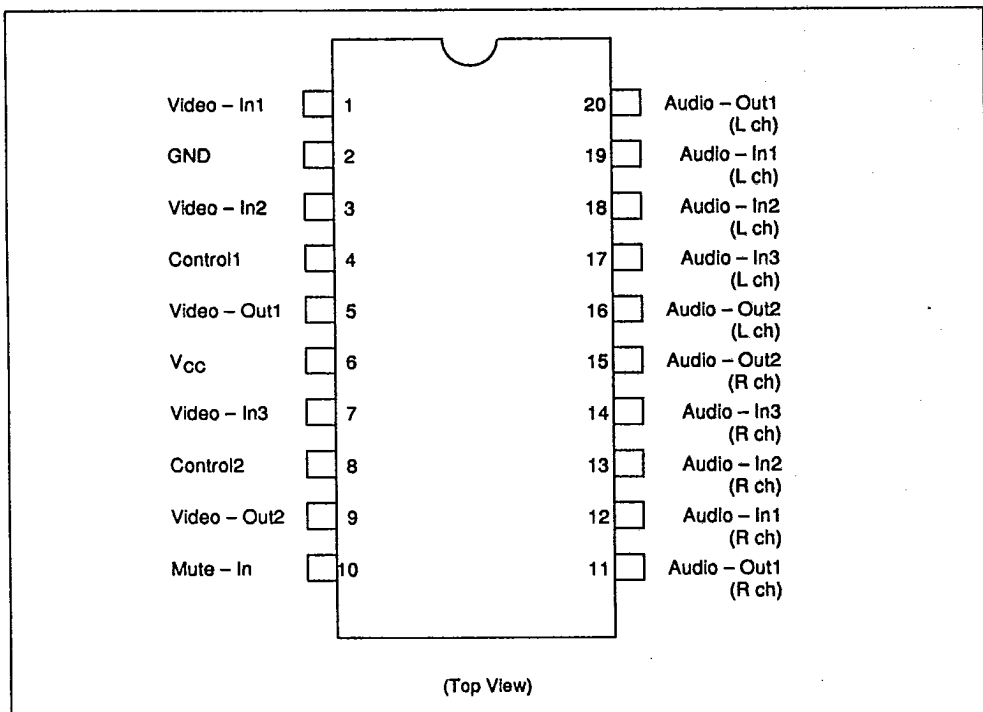

Functions

- Video signal switching
- Audio signal switching
- Audio mute function

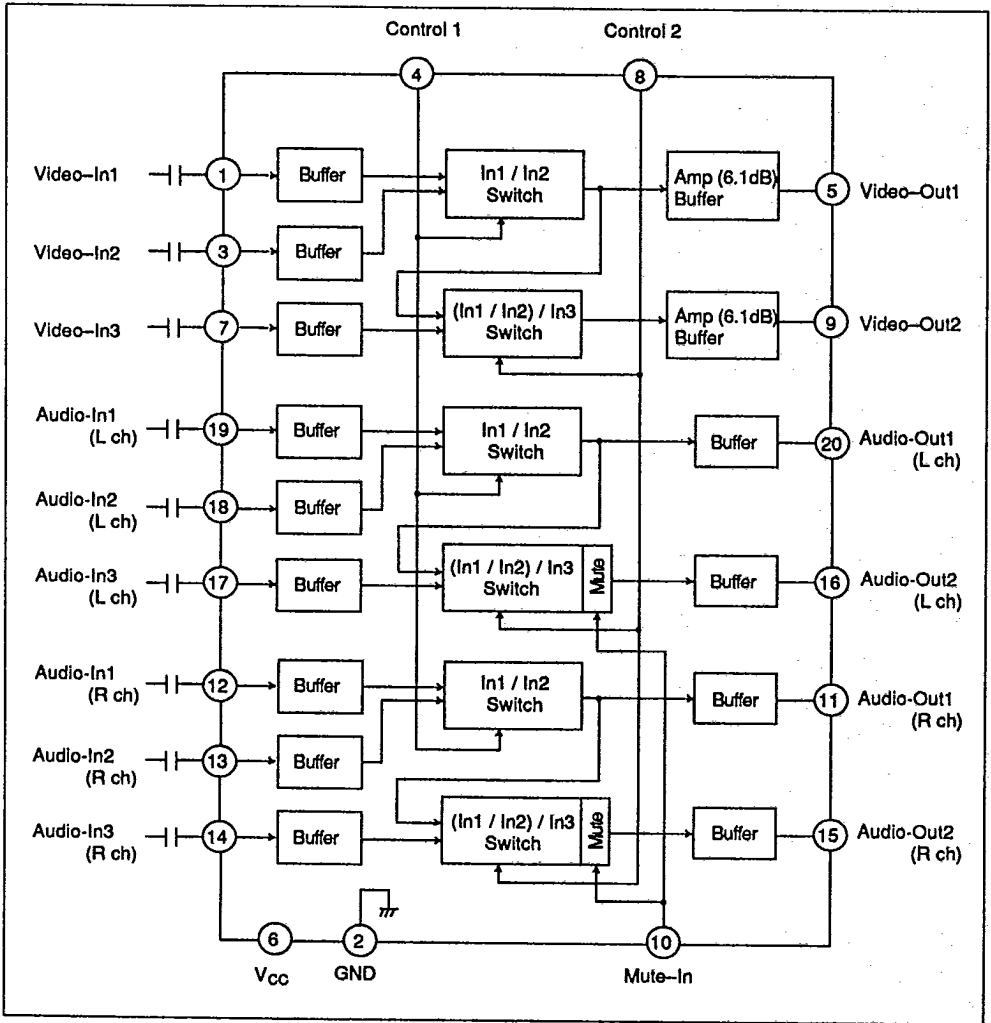

Features

- Signal switching for three video input circuits, three 2-channel audio input circuits, and two output circuits.
- Approximately 6dB on-chip amp in video switching section
- On-chip audio mute circuit
- High input impedance
- Wide frequency band
- High supply
- Can be used with 8 to 13.2 V supply voltages

Switch Table

T-77-07-0

The following table shows the relationships between the IC signal input in accordance with switching control input 1 and 2, and the mute input control signal.

No.	Switching control input			Video signal output		Audio signal output**	
	Mute	1	2	Output 1	Output 2	Output 1	Output 2
1	L	L	L	Input 1	Input 1	Input 1	Input 1
2	L	L	H	Input 1	Input 3	Input 1	Input 3
3	L	H	L	Input 2	Input 2	Input 2	Input 2
4	L	H	H	Input 2	Input 3	Input 2	Input 3
5	H	L	L	Input 1	Input 1	Input 1	-
6	H	L	H	Input 1	Input 3	Input 1	-
7	H	H	L	Input 2	Input 2	Input 2	-
8	H	H	H	Input 2	Input 3	Input 2	-

*1 Audio signal output is identical for L and R.

As the table shows, output 1 can be switched by control 1 only, and mute input is related to audio output 2 only.
